

Still lubricating like it's the 1970s?

Time to retire the brush.

Let's be honest – is your component lubrication still done by hand?

Greasy fingers, inconsistent application, wasted lubricant? ReadyLube is the solution for those who demand better.

Developed for greasing and oiling processes in production and assembly: clean, precise, accurate in quantity and ready for immediate use.

Discover what you've been missing.

ReadyLube: The standard solution for component-specific lubrication.

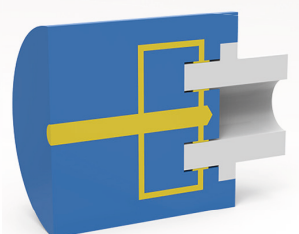

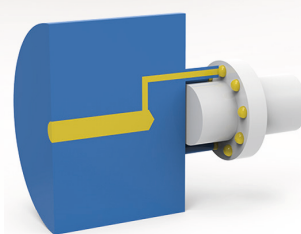

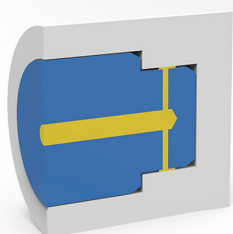

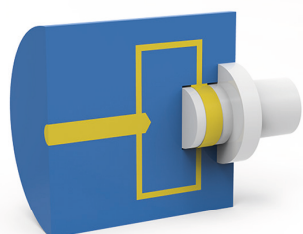

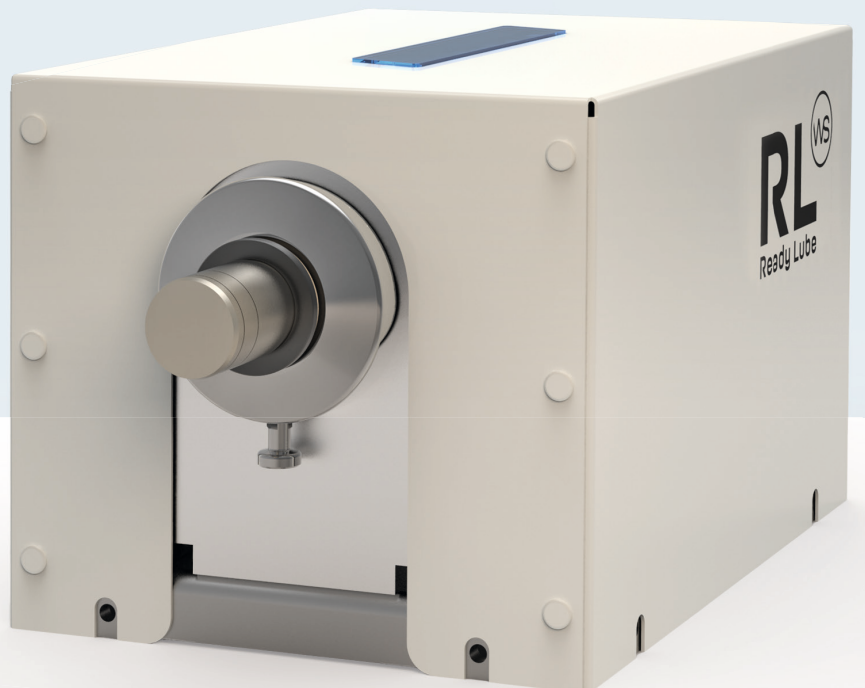

ReadyLube is a cost-efficient, plug-and-play dosing system proven in flexible manufacturing and small batch production.

Component-specific application heads ensure precise lubricant application – perfectly tailored to the requirements of each lubrication point.

Four examples are given below:

- Application head
- Lubrication channel
- Component

Hand-applied component lubrication and repeatable quality? Not going to happen.

True precision begins where this manually executed work ends.
With *ReadyLube*, lubrication becomes fast, clean, and worker-independent.

Just pick up the component ...

press it on the application head ...

done! The lubricant is applied with accuracy.

Tailored application heads ensure accurate lubrication – perfectly matched to each lubrication point.

SMEs / Component Manufacturers

„Material waste, manual errors and rework cost money. ReadyLube helps you save time, resources and hassle – every day.“

Low-volume Assemblers / Job Shops

„Different parts, different specs?
No problem – ReadyLube application heads are swappable and easy to adapt.“

Skill-based Production Environments

„Handmade work matters – but not for component lubrication. ReadyLube provides quality without complexity.“

1, 2, Ready: Lube!

Your benefits in 20 seconds:

- **Plug, Press, Apply!** – Connect it, run it, save resources.
- **No compromise on precision** – accurate in position and quantity.
- **Clean workspace** – No stray brush hairs, no greasy tools, no mess.
- **Fast changeover** – Quick-swap application heads for different parts.
- **Consistent results** – Same output in every shift, at every workstation.

The *ReadyLube* line:
Two specialised best practice solutions for precise lubrication results: Efficient. Repeatable. Cost-effective.
